# Overhead Three-Phase Transformer Bank Installation

## 1. Scope

This standard covers the information necessary to install overhead three-phase transformer banks on the 26 kV primary distribution system. Installation instructions to connect the equipment to the wood pole are included, along with requirements for vertical spacing and hardware.

## 2. Application

This standard provides direction to Seattle City Light (SCL) engineers, crews, and contractors for the installation of overhead three-phase transformer banks on 26 kV wood distribution poles.

# 3. Requirements

### 3.1 General

An overhead three-phase transformer bank shall be installed as shown in Figures 3.1a and 3.1b.

For a secondary voltage of 120/208 V, the transformer's secondary bushings shall be connected as shown in Figure 3.1d using the copper wire specified in Table 3.1.

For a secondary voltage of 277/480 V, the transformer's secondary bushings shall be connected as shown in Figure 3.1e using the copper wire specified in Table 3.1.

If the neutral wire is 4/0 AWG aluminum, install and connect a neutral stirrup as shown in Figure 3.1c.

The center phase limiter shall be installed using a connector bar and be aligned to point toward the center phase primary transformer bushing.

## 3.2 Avian Protection

A bird guard shall be installed as shown in SCL D15-1 on all transformers.

Additional avian protection shall be installed for all poles located in avian-sensitive areas as instructed in SCL 0072.01.

#### 4. Construction Notes

If there are avian and wildlife concerns, contact the SCL Design Engineer.

If there are salt spray concerns, contact the SCL Design Engineer.

If there is no pole ground, install one as shown in SCL 0451.01.

For three-phase output voltage120/208 V, use three 120/240 V transformers as shown in Table 5b.

For three-phase output voltage 277/480 V, use three 138/277 V transformers as shown in Table 5d.
